

DATA DIAGNOSTICS HEALTHCARE TECHNOLOGY WINS TWO 2016 IT WORLD AWARDS

Healthcare analytics technology from Quest Diagnostics and Inovalon connects with nearly 600 EHR platforms to provide actionable patient insights at the point of care

MADISON, N.J., June 9, 2016 – Quest Diagnostics (NYSE: DGX) and Inovalon (NASDAQ: INOV) today announced that Data Diagnostics™, a point-of-care health analytics technology, has won two IT World Awards®. The solution earned a gold medal in the IT Products and Services for Healthcare category and a bronze medal for New Products and Services. Other companies to win awards in the New Products and Services category include Dell and Samsung. The Network Products Guide’s IT World Awards are provided annually to honor achievement in all facets of the information technology industry.

Data Diagnostics is a suite of patient-specific analytical reports (or “diagnostics”) that physicians order within their existing workflow at the point of care. Reports are delivered to physicians, often within seconds, through Quest’s Care360® lab ordering and connectivity platform and nearly 600 interconnected EHR platforms. Data Diagnostics reports identify gaps in care to enhance the patient encounter and improve clinical quality outcomes, utilization efficiency and financial performance critical to payers, health systems, ACOs and patients.

Data Diagnostics reports are generated using Inovalon’s large-scale data interconnectivity and big data analytical platform. Analysis is performed in real time on data from the participating organization as well as data from Quest’s 20 billion clinical laboratory test results and Inovalon’s clinical datasets on more than 132 million patients, two of the world’s largest datasets of clinical, claims, quality and laboratory data. As a result, the physician is able to take actions during the consult based on insights generated from highly comprehensive, current medical information about the patient within their existing clinical workflow, a functionality that is key to bringing the power of big data to the point of care in real time.

Data Diagnostics is the result of a collaboration formed by Quest Diagnostics and Inovalon to help providers, payers and patients achieve better healthcare outcomes and financial performance under value-based care models.

“Data Diagnostics was designed to help physicians, providers and health plans make the pivotal transition to value-based care,” said Lidia L. Fonseca, chief information officer, Quest Diagnostics. “Data Diagnostics can help amplify the programs that health plans and health systems already have in place to manage their patient population, and leverage their IT investments and real-time data insights to meet quality and risk requirements starting at the point of care. The result is better patient outcomes and improved financial performance.”

“Inovalon is highly focused on delivering innovative technologies for the healthcare industry,” said Keith Dunleavy, M.D., CEO of Inovalon. “Data Diagnostics brings the power and benefits of transaction-based processing and advanced analytics to the healthcare ecosystem in real-time, enabling physicians to treat their patients more effectively at the point of care driving meaningful impact. This isn’t simply a new approach to managing health data, it’s a major paradigm shift that will further the transformation of healthcare as we know it.”

Network Products Guide’s 11th annual IT World Awards encompasses the world’s best in every area of information technology, including products and services, new technologies, executives and management teams, successful deployments, product management and engineering. The awards will be presented June 27, 2016, in San Francisco.

About Quest Diagnostics

Quest Diagnostics empowers people to take action to improve health outcomes. Derived from the world's largest database of clinical lab results, our diagnostic insights reveal new avenues to identify and treat disease, inspire healthy behaviors and improve health care management. Quest annually serves one in three adult Americans and half the physicians and hospitals in the United States, and our 44,000 employees understand that, in the right hands and with the right context, our diagnostic insights can inspire actions that transform lives. www.QuestDiagnostics.com

About Inovalon

Inovalon is a leading technology company that combines advanced, cloud-based data analytics, and data-driven intervention platforms to achieve meaningful insight and impact in clinical and quality outcomes, utilization, and financial performance across the healthcare landscape. Inovalon's unique achievement of value is delivered through the effective progression of Turning Data into Insight, and Insight into Action[®]. Large proprietary datasets, advanced integration technologies, sophisticated predictive analytics, data-driven intervention platforms, and deep subject matter expertise deliver a seamless, end-to-end capability that brings the benefits of big data and large-scale analytics to the point of care. Driven by data, Inovalon uniquely identifies gaps in care, quality, data integrity, and financial performance – while bringing to bear the unique capabilities to resolve them. Providing technology that supports hundreds of healthcare organizations in 98.2% of U.S. counties and Puerto Rico, Inovalon's cloud-based analytical and data-driven intervention platforms are informed by data pertaining to more than 793,000 physicians, 277,000 clinical facilities, and more than 132 million Americans. Through these capabilities, and those of its subsidiary Avalere Health, Inc., which offers data-driven advisory services and business intelligence to more than 200 pharmaceutical and life sciences enterprises, Inovalon is able to drive high-value impact, improving quality and economics for health plans, ACOs, hospitals, physicians, consumers and pharma/life-sciences researchers. Data Diagnostics[™] is a trademark of Inovalon, and the system and processes generally described herein are proprietary to Inovalon as the sole owner of the intellectual property.
