

Inovalon Research Network

Increase trial access and screening – all at no cost*

Recruiting patients for clinical trials is often time consuming and resource intensive. It can also be a challenge to capture the attention of sponsors, leading to missed opportunities and potential selection bias.

Join the Inovalon Research Network and unlock access to Patient Screener – an AI-powered solution that automates patient identification and pre-screening, connects your health system with sponsors, and boosts your chances of clinical trial selection.

Current VigiLanz customers can join the Research Network at no additional cost, and will also receive one free site-initiated study as well as complimentary access to the software for sponsor-initiated trials through the Research Network.

Enhance your trial capabilities, accelerate patient enrollment, and drive better outcomes with ease.

Advantages for your organization

-  Identify eligible patients quickly and accurately with AI-automated alerts and clinician-supported workflows
-  Reduce the manual pre-screening process with 24/7 patient eligibility identification for rapid trial response
-  Enhance trial success by fostering strong collaborations between sites, other healthcare systems, and sponsors
-  Accelerate sponsor engagement with detailed profiles of therapeutic areas of expertise, site capabilities, and historical performance
-  Reduce recruitment costs by optimizing the identification process and minimizing trial delays

Solution features

Find eligible patients with AI-driven patient identification based on specific trial criteria

Integrate seamlessly with existing EHR systems for near real-time data synchronization and reduced errors

Receive trial notifications in near-real time to keep sites informed of new trial opportunities that match their capabilities and patient profiles

Experience a streamlined onboarding process that enables quick network integration and immediate access to trial opportunities without extensive technical setup

Gain secure and compliant data management with HIPAA-aligned protections, including end-to-end encryption and regular audits to safeguard patient and trial information

*Additional data feed rates still apply to HL7 customers.
