

Clinical Research Patient Finder

Recruit eligible, diverse patients faster

Finding and recruiting eligible patients is one of the most challenging and time-consuming aspects of clinical trials. Missed enrollment targets often lead to costly delays or even trial termination.

Inovalon's Clinical Research Patient Finder™ is an AI-powered solution within the Inovalon Research Network™. It is designed to help researchers speed up the process of site-based recruitment with automatic eligibility screening, and offers real-time reports on enrollment progress.

Stop the enrollment chaos and start bringing life-saving therapies to patients sooner.

Advantages for Your Organization

-  Match eligible patients to trials in real time, significantly reducing the screening process.
-  Identify (and fix) bottlenecks sooner, before they impact enrollment targets.
-  Ensure that patient info and eligibility status is current and accurate with a direct connection to EHR data.
-  Get automated alerts and 24/7 patient eligibility screening to identify trial candidates quickly.

Solution Features

Automate patient pre-screening with AI – identify eligible patients within EHR systems, minimize manual efforts, and speed up recruitment.

Monitor real-time site activity and patient pools to gain a comprehensive view of enrollment and recruitment metrics.

Customize trial-specific patient pools based on study criteria for targeted pre-screening.

Run reports for immediate insights into site performance and recruitment data, supporting efficient trial oversight and management.

Access HIPAA-compliant portals to ensure data privacy while promoting collaborative trial management.
