

VigiLanz Infection Prevention

Near real-time alerts that drive earlier action

Prevent harm before it escalates. Inovalon's VigiLanz Infection Prevention™ turns your hospital's clinical data into timely alerts that help your team detect infections sooner, act faster, and reduce risk without the burden of manual tracking.

Gain the visibility and efficiency to meet infection control goals, improve patient outcomes, and stay survey-ready every day, powered by intelligent automation, centralized dashboards, and direct NHSN reporting.

Advantages for Your Organization

- **1** | **Prevent harm before it escalates**
Catch early signs of infection with timely alerts powered by continuous surveillance across labs, vitals, pharmacy, and more so you can intervene sooner and protect patients.
- **2** | **Free up your team to focus on prevention**
Streamline daily tasks with centralized dashboards, smart worklists, and analytics that reduce manual tracking and eliminate redundant documentation.
- **3** | **Reduce reporting burden while boosting compliance**
Submit NHSN data directly, no file uploads or double entry required. Automated denominator tracking helps your team stay survey-ready with less effort.
- **4** | **Improve infection control across your organization**
Use near real-time dashboards and trending analytics to monitor performance, spot emerging risks, and make data-driven decisions at the unit, facility, or enterprise level.

The Inovalon Difference

Built by clinicians, trusted by the nation’s top health systems, and ranked #1 by KLAS for near real-time surveillance. Our solution adapts to your protocols, helps teams work smarter, and supports safer outcomes with ease.

VigiLanz Infection Prevention connects the dots between data, clinicians, and action so your team can move from reacting to preventing. From near real-time alerts to automated NHSN reporting, everything is designed to save time, reduce risk, and give you the clarity to lead with confidence.

Who benefits:

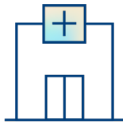

Hospitals and health systems

Infection prevention teams

Quality improvement teams

Clinical operations leaders

Real-Time Infection Control Tools

Configurable alerts and rules
Tailor surveillance to your priorities with flexible rules and thresholds. Receive the right alerts at the right time – no redundant pings or irrelevant cases clogging your inbox.

Outbreak tracking
Connect the dots across patients, units, and time to detect potential outbreaks sooner and take faster action.

Case investigation worklists
Access intuitive, dynamic lists that help your team focus on open cases, pending tasks, and today’s top priorities.

NHSN direct submission
Send infection data straight to NHSN, no manual uploads or rework, so your team can spend more time on prevention.

Trend visualization dashboards
Monitor infection trends and performance metrics quickly with near real-time graphs and tailored dashboards.
