

Smarter Rounding, Faster Interventions: A Pharmacist's Efficiency Playbook

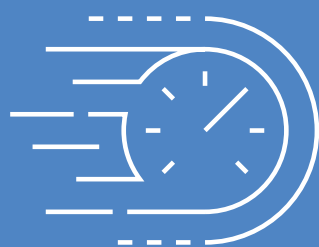

See how one pharmacist cut paperwork, gained timely insights, and made faster interventions with more time for patient care.

As a clinical pharmacist who started her career in Oncology at Northwestern Memorial Hospital, Martha Tran understands the daily grind. Before her pharmacy team adopted near real-time clinical surveillance, every day felt like catch-up. Reports were delayed and interventions happened late – if they happened at all. She shares that she spent more time shuffling paper than helping patients. Now, things are different. Here's what changed.

From Manual Workarounds to Meaningful Impact

Before Surveillance	After Surveillance
Manual prep for rounds Print reports, dig through the EHRs, and compare spreadsheets	Smarter starts to the day See key patient data, alerts, and priorities all in one view
Late reports, missed interventions Insights always lag behind need	Near real-time awareness Instant alerts lead to faster, more effective responses
Siloed documentation Details lost between paper and digital systems	Connected updates One place for all interventions and follow-ups
Standard rounding Treat all patients reviewed equally, regardless of risk	Targeted rounding Focus on what matters most and prioritize high-risk patients with near real-time data
Slow reporting Days to prep for MUEs and P&T	On-demand reports Track trends, prove impact, and prep for committees in minutes
Too much admin, not enough time for care	More time for care, and less time chasing paperwork

Time saved per day:
About 45 minutes per day¹

Intervention response time:
Immediate

Reports:
Always current and available on demand

What Pharmacists Are Saying:

With Inovalon's VigiLanz Pharmacy Surveillance™, my pharmacists are no longer stuck chasing data, they are acting on it. It's empowering to have a solution that gives pharmacy teams the real-time insights they need to catch risks sooner, prevent harm, and focus on what truly matters most: caring for patients."

- Martha Tran, Pharm.D.,
Director, Application Support,
Inovalon

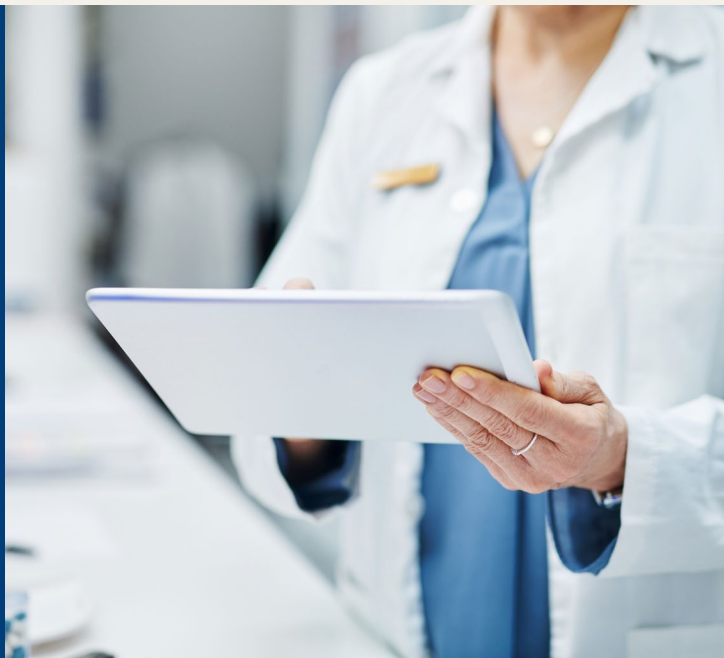

"This approach has made a significant impact on patient care, pharmacy workflows, and costs. Because of the improved capabilities within the Inovalon rules engine, we've been able to identify more opportunities for intervention more quickly than before."

- Adrienne Carey, Pharm.D.,
BCPS, Clinical Pharmacist and
Data Mining Program Manager,
