

VigiLanz Quality Management

Proactive care, powered by clear alerts integrated with your EHR

Advance your quality program with deeper insights, broader workflows, and faster interventions. Inovalon's VigiLanz Quality Management™ empowers hospital teams with near real-time surveillance, configurable rules, and advanced dashboards that surface risks others miss. From sepsis and glycemic events to readmissions and dietary gaps, this solution helps you improve patient safety and quality at scale.

It's a powerful way to simplify clinical workflows, reduce avoidable events, and support continuous improvement without adding burden.

Advantages for Your Organization

-  **Act before complications escalate**
Detect early signs of sepsis, glycemic instability, and deterioration faster than your EHR.
-  **Improve outcomes, reduce errors**
Intervene earlier and provide safer care with configurable alerts and workflows.
-  **Strengthen compliance with less effort**
Meet regulatory and internal standards through automated reporting and performance tracking.
-  **Empower confident clinical decisions**
Build trust across care teams and leadership by delivering timely, data-backed insights.

The Inovalon Difference

Elevate patient care and team performance with intelligent surveillance designed for today's clinical complexity. Powered by the Inovalon ONE® Platform, VigiLanz Quality Management helps hospitals connect the dots across data sources, detect risks earlier, and intervene with precision before harm occurs. Whether it's enhancing glucose control or preventing avoidable readmissions, this solution empowers teams to act with speed and confidence.

Smarter Capabilities That Scale

Sepsis detection

Uncover early signs of sepsis with automated alerts and patient-specific insights.

Glycemic control monitoring

Track and respond to blood glucose fluctuations with decision support tools that drive stability.

Readmission risk management

Flag patients at risk for readmission and guide discharge planning that prevents returns.

Near real-time acuity monitoring

Use MEWS dashboards to catch deterioration sooner and prioritize care.

Dietary oversight

Identify and resolve nutritional gaps that can hinder recovery and impact outcomes.

Configurable workflows

Access dedicated pages for trauma, core measures, behavioral health, and more.

Visual dashboards

Give leaders and frontline teams clear visibility into trends, risks, and performance.
