

Custom-Fit Pharmacy Workflows for Every Therapy, Team, and Program

Give your team a better experience with flexible workflows built around how they actually work.

The Challenge: Growth Outpaces Your Software Limitations

Rapid pharmacy growth exposes platform limitations. As specialty pharmacies qualify for additional limited distribution drugs (LDD) contracts, merge with other locations, and build new business lines, they often outgrow their software. Rigid, out-of-the-box workflows don't keep up with program requirements, therapy-specific needs, or internal operations – pushing teams to work in spreadsheets or manually track tasks.

- Siloed software creates friction and frustration
- Manual workarounds slow down time to therapy
- One-size workflows don't reflect how teams actually work

One Connected Solution. One Seamless Experience. One Step Ahead.

Explore how our pharmacy solution can help your teams focus, reduce friction, and work smarter every step of the way.

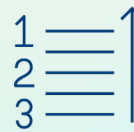

The ScriptMed Difference: Single System Simplicity

You don't have to choose between scale and flexibility. Inovalon's ScriptMed® puts control in your hands, enabling enterprise-wide configurability throughout every stage of the patient care journey. Customizable workflows are just one piece of a fully integrated, end-to-end pharmacy software designed for specialty and infusion pharmacies.

Log in just once to experience:

Role-based views that show each user exactly what they need to focus on (and nothing more)

Action-based steps that launch in response to therapy, payer, or program criteria

Automated routing between intake, clinical, and financial teams

Custom dashboards and reports for internal and external stakeholders

Flexible clinical protocols and interventions that scale with your growing pharmacy services
