

Converged Risk Surveillance Analytics

Gain a better line of sight into your risk adjustment programs

In an ever-evolving regulatory landscape, health plans must not only adapt but remain audit-ready.

Remove the blind spots in your risk adjustment programs with Inovalon's Converged Risk Surveillance Analytics™, a complimentary solution to Converged Risk™.

Other risk surveillance analytics software operate like a black box, flagging over-coded Hierarchical Condition Categories (HCCs) without explanation. Our solution offers transparency into the process, so you can tackle over-coding challenges at their source.

Advantages for Your Organization

-  **1 Lower your audit risk**
Use clinical evidence to identify and remove over-coded conditions before they cause compliance issues.
-  **2 Fix over-coding at the source**
Understand why conditions are marked as over-coded so you can resolve the issue at the root cause.
-  **3 Uncover blind spots with ease**
Stay audit ready with analytics trained on the industry's largest primary source dataset.

Key Benefits

Improve member outcomes and compliance with full visibility into your risk adjustment programs.

Full program transparency

Unlike black-box solutions, you'll know why something is flagged as over-coded.

Proven expertise

Rely on software from risk score accuracy leaders with 15+ years of experience and clinical expertise, while ensuring compliance with CMS and state regulations.

Rapid identification of high-risk condition categories

Pinpoint potentially over-coded conditions by confidence level, from very high to very low.

Elevated risk experience

Built to enhance Converged Risk to give you deeper insight into the effectiveness of your risk adjustment strategy.
