

ScriptMed[®] Infusion

Infuse confidence into every dose

Every day, infusion pharmacies face nonstop pressure to ensure patients get their treatments on time while juggling fragmented systems, time-consuming manual workflows, and increasing operational demands.

When delays are not an option, you need operations that run like clockwork. Inovalon's ScriptMed[®] delivers scheduling, documentation, and other care coordination tools in one system so you can always see where things stand and how to keep them running smoothly. Flexible workflows help keep everyone on task, ensuring that therapies are started sooner and interventions happen exactly when they're needed.

Help your care team move faster and work more efficiently so they can take better, safer care of patients.

Advantages for Your Organization

- 1** |  | **Deliver comfort faster**
Start therapy sooner with intelligent workflows that assign tasks to the right person at the right time.
- 2** |  | **Protect patients and your balance sheet**
Reduce the risk of human error, support medication adherence, and avoid payment headaches.
- 3** |  | **Stop the guesswork, start the care**
Know exactly what a patient needs and deliver it faster with a complete, up-to-date view of the patient's history.

Solution Features

Nurse scheduling, remote documentation, and billing

Handle all aspects of clinician and location coordination in one familiar and consistent application.

Infusion billing

Handle complex infusion medical billing requirements and reduce treatment delays with built-in revenue cycle management.

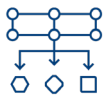

Electronic compound documentation

Ensure quality, safety, traceability, and compliance with streamlined creation and management of compound drug records.

Parenteral nutrition (PN) management

PN management supports pharmacists during real-time entry to ensure the formulation is clinically safe and stable.

Parallel workflows

Improve care coordination by driving the right work to the right user at the right time.

Far-reaching integrations

Connect patients and pharmacies, and bring order to nurse schedules, inventory, documentation, payments, and authorizations for faster, more coordinated care.

Pump and supply kit management

Manage the tracking, maintenance, and coordination of durable medical equipment (DME) and therapy-specific supply kits.

Optional add-ons

Pull in patient health histories to make more informed care decisions, or connect providers and patients in real time with customizable add-ons.
