PAYER

Converged Record Review

Ensure accurate reimbursements with a faster, smarter MRR workflow

Medical record review (MRR) teams often juggle competing priorities and inefficient systems, which increases the risk of inaccurate diagnosis coding. Coders need software that eliminates low-value reviews containing no clinical documentation value and focuses efforts where they matter most.

Inovalon's Converged Record Review™ smooths out the process by using AI to help your team achieve stronger results and stay ahead of regulatory demands.

Advantages for Your Organization

1 

Improve HCC capture

Save time on each medical record review with improved hierarchical condition category (HCC) capture, which highlights conditions requiring extra attention.

2 

Better project management

Gain clear visibility into reviewer productivity and streamline project assignment.

3 

Decrease regulatory audit risk

Minimize false positives using Converged Record Review's natural language processing (NLP) to reduce the risk of non-compliance.

Key Benefits

Reduce false positive diagnoses and increase efficiency in medical record review, without compromising accuracy. This AI-powered solution interprets medical text in records for you, so you can work faster and more efficiently.

Gain differentiated value

Avoid traditional pitfalls with NLP that highlights high-value coding opportunities.

Improved decision-making

See NLP highlights turned into risk-adjustable findings that can be used for submissions, in real time.

Reduce manual workload

Lower false positive rates and cut down on expensive, time-consuming manual chart reviews.
