

Patient History

Enabling personalized care with linked, curated, and actionable data insights

Across the healthcare continuum, care teams are challenged due to having either too much or too little data to power personalized decision-making.

Inovalon's Patient History™ addresses this challenge by leveraging 25 years of healthcare expertise to enrich, unify, and transform claims and clinical data into comprehensive, linked, and actionable data with insights. This actionable data is delivered in a highly customized, user and setting specific way that ensures care teams receive the quality and quantity needed to make quick, yet highly informed decisions.

No matter the care venue or technology, our solution seamlessly integrates with existing software to help accelerate informed decisions and enable personalized care.

How It's Used

For telemedicine, urgent care, and home health, augment data within the EHR to look back years before a patient's first visit, limiting unnecessary tests and treatments to focus on the immediate patient need.

For specialty and retail pharmacists, quickly obtain patients' conditions – including medication statements, progress notes, previous medications, and re-authorizations – all from one quick inquiry.

For value-based care, understand and close gaps in the patient's care.

Discover the Difference With Inovalon

View open and closed medical claims, medications, labs, allergy information, gaps in care, existing and worsening disease conditions, and more.

Improve the patient experience and care outcomes with 87% more comprehensive, linked, and actionable data.¹

View customized data insights rapidly with an 27% reduction in data noise.²

¹Based on percentage of matched patients who will have active enrollment within last 5 years and claims within the last 5 years.

²Inovalon internal reporting, average of customer results and their data criteria. February 2025.
