

VigiLanz Pharmacy Surveillance Pro

Power smarter, safer pharmacy care

Pharmacy leaders know that every alert, dose, and missed signal carries weight. Inovalon's VigiLanz Pharmacy Surveillance Pro™ puts near real-time data and clinical intelligence at your fingertips so you can prevent harm before it happens. Built for antimicrobial and opioid stewardship programs, this software empowers your clinical team to act fast on critical insights across antibiotic use, resistance trends, and high-risk medication events.

Automated alerts, customizable workflows, and direct NHSN integration remove the manual lift, while configurable dashboards turn every intervention into measurable proof of value. Spend less time chasing data and more time improving patient outcomes.

Advantages for Your Organization

-  **See risks before they escalate.**
Near real-time alerts flag drug-bug mismatches, duplicate therapies, and adverse event risks so your team can intervene before harm reaches the bedside.
-  **Strengthen stewardship programs.**
Simplify antibiotic use and resistance (AUR) reporting and drive safer antimicrobial and opioid use through automated, compliance-ready insights.
-  **Show measurable impact.**
Track interventions, benchmark outcomes, and show pharmacy performance with dashboards that turn daily work into proof of value.
-  **Protect patients by supporting your people.**
Reduce manual reviews and documentation burden with one intuitive solution that restores focus and time for direct patient care

The Inovalon Difference

Built by clinicians for clinicians, VigiLanz Pharmacy Surveillance Pro transforms raw data into clear, actionable alerts that align with how pharmacy teams actually work. Near real-time EHR integration ensures you see risks as they happen, not after the fact. Its rule-based AI adapts to your hospital's priorities, from antimicrobial de-escalation to opioid safety, and supports seamless AUR reporting and Joint Commission compliance. Backed by Inovalon's clinical experts, this proven solution brings clarity and confidence to every decision so your team can focus on what matters most: protecting patients.

Solution Features

Antimicrobial stewardship dashboard with prompt alerts for de-escalation, drug-bug mismatches, high-cost drugs, and antibiotic “time-outs.”

Opioid stewardship tools for dosage monitoring, concurrent sedative use detection, and risk identification.

Automated AUR reporting with direct NGSN submission using data formatted according to the HL7® CDA standard.

Configurable rules and work flows tailored to your facility's focus areas: anticoagulation, renal dosing, IV-to-PO conversions, and more.

Analytics and antibiograms to visualize usage, resistance, and outcomes.

EHR integration and continuous data refresh for near real-time surveillance.

Audit-ready reporting to support Joint Commission and CMS requirements.
